NOTE	 Ripple & noise are measured Tolerance : includes set up Line regulation is measured Load regulation is measured Each output can work within 	rameters NOT specially mentioned are measured at 230VAC input, rated load and 25°C of ambient temperature. a & noise are measured at 20MHz of bandwidth by using a 12" twisted pair-wire terminated with a 0.1uf & 47uf parallel capacitor. ance : includes set up tolerance, line regulation and load regulation. egulation is measured from low line to high line at rated load. regulation is measured from 20% to 100% rated load, and other output at 60% rated load. output can work within current range. But total output power can't exceed rated output power. ower supply is considered a component which will be installed into a final equipment. The final equipment must be re-confirmed that it still meets directives.
